SUMMARY

Full-stack engineer and AI builder with 2 shipped SaaS products (Poise, SynQ) and a production Financial RAG system at CrowdWisdomTrading. Specialized in AI-native systems, multi-agent LLM orchestration, and scalable backend infrastructure.

WORK EXPERIENCE

Founding Engineer Intern, Leadnex — Remote Jan 2026 – Present

Poise — AI Subscription Intelligence

usepoise.com

- Sole engineer on Poise end-to-end – an AI-native SaaS that detects and optimizes software subscriptions via a multi-agent OpenAI orchestration pipeline: specialized agents handle spam filtering, billing cycle detection, recurring vs. one-time classification, and vendor clustering to aggregate transactions into subscription instances.
- Integrated Google Cloud Pub/Sub webhook for real-time email ingestion, feeding directly into the detection pipeline and updating financial dashboards live; Supabase Edge Functions handle email and WhatsApp renewal alerts.
- Stack: React + TypeScript frontend, Supabase (PostgreSQL, Auth, RLS), BullMQ + Redis for job queuing and AI call handling, all on Railway – grew to 300 users, 15% free-to-paid conversion, 100 users in 10 days.

SynQ — B2B LinkedIn CRM

usesynq.co

- Sole engineer on SynQ – a B2B LinkedIn CRM with multi-account inbox management, Gemini-powered lead classification, and pipeline tracking via Unipile API webhooks; also built an AI-native LinkedIn post generation feature using behavioral RAG, creator memory snapshots, pgvector semantic retrieval, and a multi-step Claude generation pipeline.
- Stack: Express 5 + TypeScript + Drizzle ORM (PostgreSQL + pgvector) backend, React + Vite + Zustand frontend, Supabase auth, Paddle billing, BullMQ + Redis for async AI orchestration, multi-tenant RBAC – deployed on Railway.

CrewAI/LLM Intern, CrowdWisdomTrading — Remote

Sep 2025 – Feb 2026

- Built a production Financial RAG system ingesting content from 16 YouTube channels, 5 Twitter accounts, and 3 Discord servers into ChromaDB – processing 50+ videos, 500+ tweets, and 1000+ Discord messages daily.
- Designed multi-agent trading workflows with CrewAI and Azure OpenAI (GPT-4.1): transcript extraction → semantic chunking → embeddings → vector storage, enabling automated sentiment analysis and natural language market querying.

PROJECTS

Latency-Aware Task Partitioning in MEC Networks

Ongoing

- Proposed a metaheuristic framework (ACO, GA, PSO) for optimal task partitioning and user association in Mobile Edge Computing networks to minimize end-to-end latency.

AI-Native Interactive Portfolio

21 ★ on GitHub

Feb – Aug 2025

- Built an AI-powered portfolio with a human-like avatar (Next.js, OpenAI API, Mistral API, LangChain) – reached 3.5K active users, 16K+ page views, and 1m 42s avg. engagement since launch with zero paid acquisition.

TECHNICAL SKILLS

- **AI & Agents:** OpenAI API, Multi-Agent Orchestration, LangChain, CrewAI, RAG, ChromaDB, pgvector, Hugging Face, PyTorch, TensorFlow, Scikit-learn
- **Languages & Web:** Python, TypeScript/JavaScript, C++ , SQL, React, Next.js, Express, Flask, Node.js
- **Infrastructure:** Supabase, BullMQ, Redis, Railway, Docker, Google Cloud Pub/Sub, Git, GitHub
- **Data & BI:** Pandas, NumPy, Plotly, Matplotlib, Streamlit, Dash, Power BI, Tableau

EDUCATION

Manipal University Jaipur

2025

Bachelor of Technology (B.Tech) in Computer Science Engineering (Hons.) IoT and IS
